

## Corporate Fact Sheet

### BUSINESS SUMMARY

Sendmail® provides appliance-based products, applications and services that allow large enterprises and government agencies to architect and deploy secure mail and message infrastructures. Since 1982, thousands of commercial and open source customers around the globe have relied on Sendmail for a unified approach to the complex problems of policy-based message handling and routing. The company's comprehensive suite of applications addresses the challenges of gateway management, inbound threat protection, data leak prevention, email authentication and intra-company message management. These applications run on Sendmail's family of Sentrion® Message Processors, which are available in hard appliance, virtual appliance and blade server configurations and as a SaaS for filtering.

## DIFFERENTIATORS

Sentrion Message Processors are high-performance message security appliances that provide a unified solution to the complex problems of policy-based message handling and routing. Sentrion is available in a hard appliance, virtual appliance and blade server configurations and as a SaaS for filtering. The Sentrion Message Processing Engine and its comprehensive suite of applications provide secure mail and message infrastructure for:

### 1. Gateway Management

Secure reliable message routing and delivery; sophisticated connection controls and rate throttling

### 2. Inbound Protection

Spam, virus and malware protection; IP reputation services

### 3. Email Authentication

Authentication of incoming messages; Digitally signing of outgoing messages

### 4. Outbound Data Leak Prevention

Highly accurate, in-line monitoring and enforcement; Policy-based message encryption

### 5. Intra-company Message Management

Front-ends and protects Microsoft Exchange and IBM Lotus Notes; Enforces internal acceptable use policies

**360° Messaging Assessment** – The Sendmail 360° Messaging Assessment Service uncovers security and compliance risks in inbound and outbound messaging based on a 48-hour analysis period. This unique service determines compliance, security, and operational risks in messaging prior to initiating an education, enforcement and blocking strategy.

**Sender Authentication and DKIM** – Sendmail is a co-author of the **DKIM** standard and is the first, and only, vendor to support DKIM, DK, SIDF, SPF on Sentrion appliances, software and Open Source solutions.

**Complex Message Handling** – Sentrion's policy-centric Message Processing Engine is optimized to handle very complex message handling and routing. With the proven Sendmail MTA, the onboard LDAP directory and the industry's most powerful policy engine, Sentrion is able to make intelligent email policy enforcement and routing decisions in the real-time message stream without impacting end-user productivity or workflow.

**Sendmail API** – The Sendmail Milter API promotes third-party integration with Sendmail products. 50+ solutions are available to support strategic initiatives such as Archiving, Sender Authentication, spam and virus scanning.

**Policy Management** – With comprehensive capabilities and virtually unlimited flexibility, Sendmail policy management allows businesses to extend message security beyond inbound spam and virus protection to include outbound regulatory compliance (HIPAA, SOX, GLBA, and ITAR and more), corporate governance, and more complete message control.

**Trusted Advisors** – Sendmail employs the world's foremost experts in the development, implementation and configuration of enterprise messaging systems. Sendmail has over 1,000 enterprise implementations.
