Sendmail
Mailcenter™

Overview

The Sendmail Mailcenter combines your most demanded messaging to deliver a turnkey, standards-based solution, built on a secure and reliable architecture. This solution extends the scalability and performance of your messaging system to solve the most complex email problems cost-effectively.

Extends the scalability
and performance of your
messaging system.

Operating Systems: Solaris 6, 7, 8; Windows NT,
Window 2000, RHL AS/ES 2.1; AIX 4.3.3, 5.1;
SLES 7

SENDMAIL®
THE FULL POWER OF EMAIL

The Sendmail Advantage

Email. Webmail access. Security. Reliability. These are essential messaging needs. But many organizations have not been able to satisfy the explosive demand for these services because of cost, security and scalability issues. Popular groupware messaging systems are not designed to handle the core email load and security demands that are being placed on mail systems today, and they are not prepared to handle the exponential growth in message traffic volume.

Designed from its inception for carrier-scale environments, Mailcenter scales to support hundreds of thousands of accounts with secure and reliable performance by taking core messaging functionality and an optimized architecture to deliver:

- *A secure email network that protects an entire organization by managing the email flow and filtering against system attacks*
- *Performance that scales to demanding user loads while efficiently utilizing hardware*
- *Reliable design to maximize data integrity*
- *Maximum performance to price with the ability to support tens of thousands of users on a single server*

Features and Benefits of the Mailcenter

Mailcenter provides a full complement of Internet mail services, including browser-based access over the Web or wireless device and a fast and scalable message store. These components are integrated with a system topology designed to intelligently deploy email routing servers that are tolerant to failures, spikes in volume and hacker attacks. This messaging suite increases security, performance and scalability while leveraging your existing hardware investment.

Email Storage and Access

- *Fast, scalable POP and IMAP access minimizes latency and speeds the productivity gained from the messaging system*
- *Highly flexible and reliable message store*
- *Single instance message storage and online backup for reduced planned downtime and speedy recovery*
- *User level personalization for preferences for vacation, password and phone response settings*

Web and Wireless Access

- *Browser-based email access that provides complete email client functionality for web, wireless devices and phone access*
- *Address book to access, create, modify and save contact information*
- *Central directory access for system-wide user contact information*
- *Customizable end-user web interface*

Secure Email Infrastructure

- *Virus and spam-free email with Sendmail Anti-Virus from McAfee*
- *Attachment Filter v2; Subject Line Filter and Anti-Spam controls*
- *Secure transmission channel with TLS and secure access over SSL & WTLS*
- *Increased reliability with failover and fallback message routers*
- *Mirrored message routers provide load-balancing to increase capacity*

Integrated System Management

- *Central management and administration to efficiently control multiple servers from a single web-based administration console*
- *LDAP-centric user integration for all messaging systems*
- *Supports all POP/IMAP mail clients*
- *Multiple authentication schemes supported*
