

Sendmail Mailstream Manager™

Policy-Centric Control of Email Security

OVERVIEW

As email security becomes an ever-more demanding problem for complex, information-driven enterprises, IT departments have had to add and enhance point products that protect against different types of threats. Over time, the growing assortment of point products becomes increasingly difficult and costly to manage. While well intentioned, these heterogeneous products place limits on content security, filtering, policy enforcement, reporting and virtually every other security function—leaving the enterprise exposed. The ensuing failure puts data at risk, and opens the door for leakage and regulatory penalties for non-compliance.

MAILSTREAM MANAGER

Mailstream Manager provides award winning enterprise email security delivering centralized policy management over inbound and outbound mail to eliminate unwanted messages, defend network assets, protect private and confidential data and enable compliance. Featuring the industry's most powerful policy engine, Mailstream Manager can create policies based on any centrally defined action; on any message; with any condition; from any individual sender, group, or division and to any recipient. Mailstream Manager provides the following applications and options:

- Multiple anti-spam and virus engines
- Zero-hour malware detection
- Packaged policies for HIPPA, GLBA, and CA SB1386
- SMTP traffic control
- Clientless encryption
- Open Source Sendmail implementations

BENEFITS

Sendmail Mailstream Manager provides management and control over mail processing for complete protection from inbound and outbound threats, including compliance with regulatory requirements, and enforcement of corporate code of conduct.

BENEFITS

- Centralizes Policy Management and Security
- Protects both Inbound and Outbound mail
- Ensures Compliance and Corporate Governance

BENEFITS

Policy-Centric Messaging Security

- Advanced content analysis for effective enforcement
- Intuitive dashboard-style user interface for simplified management
- Easy creation and cataloging of policies for building and maintaining libraries of business rules
- Rapid time-to-value with pre-built policies, lexicons and encryption

Comprehensive Regulatory Compliance and Corporate Governance

- Enables compliance with industry regulations for SOX, GLBA, HIPAA, FERPA, PIPEDA, Reg FD and SEC Rule 17-4a
- Enables enforcement of corporate code of conduct requirements, including HR appropriate usage policies, protection of intellectual property, selective archiving, etc.
- Secures intellectual property, customer data, and privileged email
- Reduces audit costs and risks with unified management and reporting

FEATURES

Mailstream Manager provides advanced content filtering, rich policy management, and directory integration for user and role-based policies.

- Unified policy interface for evaluating all message envelope, header, body and attachment content
- Deep scanning of all attachment types, compressed archives, and other embedded content (up to 32 nested layers)
- Rich built-in policy content for threat protection, regulatory compliance, and corporate governance
- Graphical reporting and real-time monitoring dashboard
- Zero-hour outbreak defense and email classification using global detection & fingerprinting network
- Leading content scanning engines for anti-abuse, anti-virus
- Built-in HIPAA and GLBA lexicons, sample SOX 404 and information classification compliance
- Built-in encryption and ability to integrate with 3rd party encryption solutions
- LDAP integration for policies driven by recipient roles, group membership, and other attributes
- Routing and queue management
- Administrative quarantine

OS AVAILABILITY

Red Hat Linux AS 4; Solaris 9, and 10

SUMMARY

Mailstream Manager is purpose-built to protect the most demanding enterprise networks. Mailstream Manager has over one million seats in production across the globe.
