E-mail Management & Security

SENDMAIL, INC.

Mailstream Manager 1.0

WINNER

Ensuring regulatory compliance is becoming increasingly important in corporate communications, and finding ways to secure outbound communication is as important as securing inbound e-mail. Sendmail's (www.sendmail.com) Mailstream Manager 1.0 gives messaging administrators and compliance personnel the tools to fulfill both needs admirably, making it an Excellence Awards winner.

Mailstream's ability to intuitively configure policies impressed judges, as did its overall modular approach, which allows companies to pick other scanning engines if they wish. Mailstream also includes scanning engines from McAfee Inc. and Cloudmark Inc. for administrators seeking a bundled solution.

Furthermore, Mailstream allows companies to keep out inbound message-based attacks and provides excellent visibility into the methods used to create and deploy policies, making it easy to understand and document auditing procedures.

The judges also liked the extensibility afforded through Sendmail's XXL e-mail processing language, which allows companies to create messaging workflows using Mailstream.
